

Turning form fills into booked clients, automatically.

A lead capture and nurture system built in GoHighLevel — from the moment someone submits a form, through automated email and SMS follow-up, to a booked appointment or converted opportunity.

- Form Builder
- Workflow Automation
- Email + SMS Sequencing
- Conditional Branching

100%

of new leads enrolled automatically — zero manual follow-up

2

channels working together: email and SMS, in the same sequence

24h

response window before a lead is escalated to the team

Branching

logic that reacts to opens, bookings, and tags in real time

01 How the system works

Every workflow follows the same backbone: capture the lead, notify the right person, and keep following up until the lead either responds or is handed off — with no gaps for a lead to fall through.

CAPTURE Form submitted A custom GoHighLevel form (quote request, booking, popup, or ad lead) triggers the workflow the instant it's submitted.	ROUTE Notify & assign The opportunity is moved to the right pipeline stage, a task is created, and the lead is assigned to the correct team member.	NURTURE Email + SMS sequence Confirmation, thank-you, and follow-up messages go out automatically across both channels on a set schedule.	ADAPT Branch on behaviour The workflow checks whether the lead opened an email or booked a call, then branches into a different follow-up path.
--	---	---	---

02 Instant response workflow

The moment a lead submits the site's contact form, the system fires a client notification, a thank-you text, and a thank-you email — no one has to be watching the inbox.

Internal Notification

Thank You SMS

Thank You Email

Team notified instantly

An internal alert fires the moment a form comes in, so no lead sits unnoticed.

Dual-channel thank-you

The lead gets an SMS and an email in the same breath, meeting them wherever they check first.

03 Quote requests, followed to resolution

A quote-request lead moves through pipeline updates, a confirmation email, task creation, and a team assignment — then waits 24 hours and checks whether the lead has responded before deciding what happens next.

04 Multi-trigger nurture with open-tracking

One nurture sequence can be entered from three different triggers — a new contact, a Facebook ad lead, or a manual tag — then checks whether each email was opened and routes the contact down a "Yes," "No," or "None" path accordingly.

Set Event Start Time

Wait 1 days before

Email 1

Wait For Open (or 1 day)

Was Email 1 Opened?

If "Email Event" is "Opened"

If "Email Event" is not "Opened"

When none of the conditions are met

- One workflow, three entry points
- Contact created, ad-driven interest, or a manual tag — all leads land in the same nurture logic.
- Opens decide the next step
- A conditional check on "Email Opened" splits contacts into Yes / No / None paths for smarter follow-up.

05 Booking workflow with conditional branching

The most advanced build in this system: a booking workflow that branches on whether an email was opened, assigns owners, sends internal and user-facing notifications, then re-checks for a booking tag before deciding the final path — email follow-up, SMS follow-up, or a fresh opportunity.

What this setup actually gets a client

The screenshots above are working automations, not demo templates — this is the exact structure clients are running today for services like custom quotes, appointment bookings, and ad-driven lead capture. The value isn't the workflow diagram; it's what stops happening once it's live.

+ No lead waits for a human to notice the form submission

+ Every lead gets both an email and an SMS touch, automatically

+ Follow-up adapts based on real behaviour, not a fixed timer

+ The right team member is notified and assigned without manual routing
